ROUND 2 OFFICIAL SUBMISSION

CampaignGuard: Pre-Publication Preflight & Cryptographic Lock

From Round 1 Plan to fully functional MVP: checking marketing copy and visuals against a single approved brief with deterministic math, multimodal AI, and SHA-256 revision sealing.

🌐 **Live App:** cg.kshitijpro.xyz (Mirror: campaignguard-five.vercel.app) 📦 **Source Code:** github.com/KSHITIJadakane/CAMPAIGN_GUARD

100%	4 Layers	SHA-256	0 Logins
CORE JOURNEY BUILT	AUTOMATED PREFLIGHT	CRYPTOGRAPHIC SEAL	INSTANT PERSONA SELECT

1. The Problem Re-Validated (Round 1 Hypothesis → Round 2 Working Proof)

Multi-Asset Contradiction Leaks — CRITICAL RISK

- **Desynchronized Channels:** Social caption offers 20% OFF, while the graphic banner states 30% OFF.
- **Channel Leakage:** VIP subscriber promo codes erroneously broadcasted onto public ad feeds.
- **Impact:** Consumer chargebacks, advertising disputes, and severe brand margin leakage.

Scientific & Regulatory Claims Drift — LEGAL PENALTY

- **Engineering Misalignment:** Copywriters claim "24-hr ice cold" when lab spec certifies only 12 hours.
- **Prohibited Superlatives:** Words like "Miracle", "Guaranteed", or "Cure" slip past manual proofing.
- **Impact:** Statutory FTC / ASCI false advertising notices and regulatory investigation.

The Velocity vs Legal Bottleneck — OPERATIONAL LOSS

- **Review Gridlock:** Creative teams output 50+ assets weekly; legal review takes 4 to 7 business days.
- **Rushed Bypasses:** Over 64% of high-tempo campaigns bypass legal review under launch deadlines.
- **Impact:** Critical compliance errors caught only after campaign goes live in public.

Post-Approval Silent Modification — LIABILITY EXPOSURE

- **Out-of-Band Mod:** Creators edit approved copy or swap banner PNGs directly before scheduling.
- **Lost Traceability:** Zero cryptographic record of what exact file hash was approved by legal.
- **Impact:** General counsel held liable for unauthorized creator revisions with no defense log.

Round 1 Scope vs. Round 2 Reality

AREA	ROUND 1 SUBMISSION (THE PLAN)	ROUND 2 SUBMISSION (THE FUNCTIONAL BUILD)
Campaign Contract	Proposed single source of truth data structure.	Fully functional builder with parameters, claims, terms, and channel variants.
Inspection Engine	Conceptual 4-layer check architecture.	Live hybrid pipeline: deterministic TypeScript math + Google Gemini 1.5 Pro multimodal.
Approval Model	Theoretical version-bound approval.	Active SHA-256 payload lock that auto-revokes to INVALIDATED upon post-approval edit.
Judge Usability	Deferred to later development rounds.	Zero-setup web app with 1-click persona switching and pre-seeded benchmark demo.

USER CENTRIC ARCHITECTURE

Target Markets, 3 Product Sides & Go-To-Market Approach

Clear separation of operational responsibilities between Brand Managers, Creators, and Reviewers.

1. The Three Operating Sides of the Product

PRODUCT SIDE	TARGET USER ROLE	CORE RESPONSIBILITIES	WHAT CAMPAIGNGUARD DELIVERS
Creator Side SUBMISSION	Copywriter, Graphic Designer, Influencer, External Agency	Upload draft captions, banner PNG/JPEGs, video text overlays, and promo codes.	Sub-10s feedback, exact line-item contradiction alerts, 1-click corrective rewrite proposals.
Manager Side COMMAND	Brand Manager, Marketing Director, Growth Lead	Create campaigns, define budgets, review overall compliance status, coordinate launch dates.	Consolidated campaigns hub, 1-click "Accept All Fixes" command, instant status visibility.
Reviewer Side LEGAL GATE	Legal Counsel, Compliance Officer, Senior Approver	Upload brand contracts, define discount caps, approve claim verbiage, sign off on releases.	Cryptographic SHA-256 revision lock, immutable audit ledger, automatic tamper invalidation.

2. High-Stakes Target Market Verticals

D2C & E-Commerce ($5M–$50M ARR) HIGH VELOCITY

- **Core Pain:** Creators leaking 30% discount codes during 20% sales events.
- **Commercial Hook:** "Zero-leakage promo code & claims guard before Black Friday."

Influencer Marketing Agencies SCALE BOTTLENECK

- **Core Pain:** Reviewing 50+ creator drafts weekly takes 20+ hours of manual proofing.
- **Commercial Hook:** "Cut creator asset proofing time from 3 hours to 45 seconds per pack."

Regulated Health, Wellness & Cosmetics REGULATORY SCRUTINY

- **Core Pain:** ASCI / FTC fines for unauthorized clinical claims and missing disclaimers.
- **Commercial Hook:** "Deterministic compliance audit trail ready for legal sign-off."

Consumer FinTech & Financial Services STATUTORY COMPLIANCE

- **Core Pain:** Omission of statutory APR caveats and mandatory qualification terms.
- **Commercial Hook:** "Mathematical guarantee that all legal disclaimers are present."

3. The Go-To-Market & Prospect Outreach Playbook

STEP 1: THE WEDGE

Free Discrepancy Teardown

- Crawl prospect's public Instagram/Meta ad library.
- Scan assets through CampaignGuard against their website terms.
- Send a 1-page "Contradiction Report" showing live claim errors.

STEP 2: FRICTIONLESS PILOT

Single-Campaign Audit ($299)

- No long software procurement cycles or multi-seat contracts.
- Offer a $299 audit package for their upcoming launch event.
- Prove ROI by catching 3+ discrepancies before ad spend begins.

STEP 3: AGENCY FLYWHEEL

Viral Creator Portal

- Agencies invite 10–50 creators per campaign into CampaignGuard.
- Creators experience instant pre-flight checks and faster payouts.
- Creators recommend CampaignGuard to their other brand clients.

30 POINTS: CORE WORKFLOW FULLY FUNCTIONAL

End-to-End Operational Journey (5 Modular Stages)

Judges can execute the complete journey from contract creation to cryptographic sealing without external guidance.

STAGE	USER ACTION & INPUTS	ENGINE PROCESSING & INTELLIGENCE	OUTPUT & NEXT STEP
Stage 1 Contract Truth	Brand Manager defines campaign parameters: discount %, end date, approved claims, prohibited terms, channel variants.	Validates parameter boundaries, creates immutable Contract v1 record, initializes campaign state.	Canonical brief established. Proceed to Creative Studio →
Stage 2 Creative Studio	Creator uploads draft assets: caption text, banner graphics (PNG/JPEG), and PDF specification sheets.	Ingests multimodal assets, calculates initial payload SHA-256 hash, prepares inspection payload.	Pack payload registered. Proceed to Preflight Scan →
Stage 3 Preflight Audit	System triggers automated 4-layer inspection pipeline across facts, cross-asset consistency, and brand rules.	Hybrid engine executes deterministic TypeScript regex + Google Gemini 1.5 Pro multimodal analysis.	Structured Findings Report with severity tags and proposed fixes.
Stage 4 Fix & Lock	Reviewer evaluates findings; clicks "Accept All Proposed Fixes" or edits copy; triggers cryptographic lock.	Reconciles asset copy with contract truth, computes final SHA-256 signature, binds to Reviewer ID.	Campaign status: APPROVED. SHA-256 seal generated.
Stage 5 Audit Ledger	Legal, brand, or finance teams inspect permanent chronological event record and tamper detection history.	Maintains immutable ledger of all actions (brief created, scan run, fixes merged, approval sealed).	Tamper-proof compliance certificate ready for payout release.

The Tamper-Evident Post-Approval Revocation Gate

What Happens When an Asset Is Edited Post-Approval?

AUTOMATIC REVOCATION

- **Out-of-Band Attack:** Creator changes approved caption discount from 20% to 35% after legal sign-off.
- **Payload Hash Verification:** Engine recalculates SHA-256 hash across current assets; detects mismatch with sealed hash.
- **Instant State Transition:** Status immediately flips from 🟢 **APPROVED** to 🔴 **INVALIDATED**.
- **Audit Logging:** Permanent record written with actor identity, timestamp, and unauthorized payload diff.
- **Publication Block:** External distribution APIs / webhooks are hard-blocked until full re-review.

Usability Engineering: Frictionless Navigation

Breadcrumb & Stage Stepper

USABILITY

- **Top Stepper:** Shows active stage (1 Contract → 2 Creative → 3 Audit → 4 Lock → 5 History).
- **Bottom Action Bar:** Explicit "← Previous Step" and "Proceed to Next Step →" buttons.

Campaigns Hub Segregation

USABILITY

- **Directory Separation:** Live client campaigns separated from benchmark demo.
- **Direct Return:** "← Back to Campaigns Hub" available on every screen.

RETINA SCREEN CAPTURES

Production Interfaces: Hub, Contract & Creative Studio

Real system screen captures from the deployed live application at cg.kshitijpro.xyz.

1. The Campaigns Hub Directory (/dashboard)

LIVE PRODUCTION VIEW

- **Directory Isolation:** Clear cards separating active user campaigns from the pre-seeded benchmark demo.
- **Quick Metrics Bar:** Instant summary of active campaigns, flagged contradictions, and sealed packages.

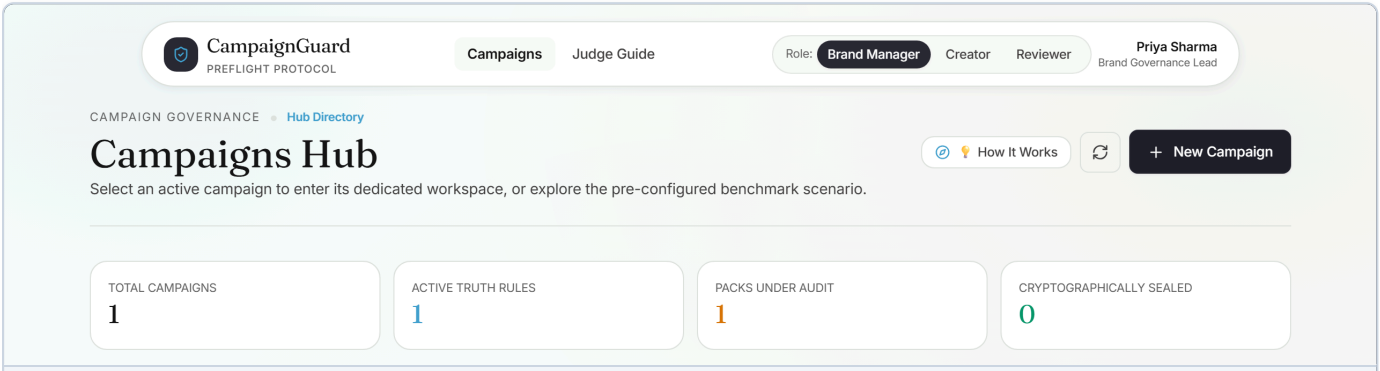

FIGURE 1.1: CampaignGuard Multi-Campaign Hub with Benchmark and Live Campaign Separation https://cg.kshitijpro.xyz/dashboard

2. Step 1 • Truth Contract Builder (Brand Manager Persona)

STEP 1 • TRUTH BASELINE

- **Single Source of Truth:** Canonical definition of discount rates, expiry dates, approved claims, and banned terms.
- **Channel Variant Overrides:** Dedicated parameters for Instagram, Email VIP, and Partner retail channels.

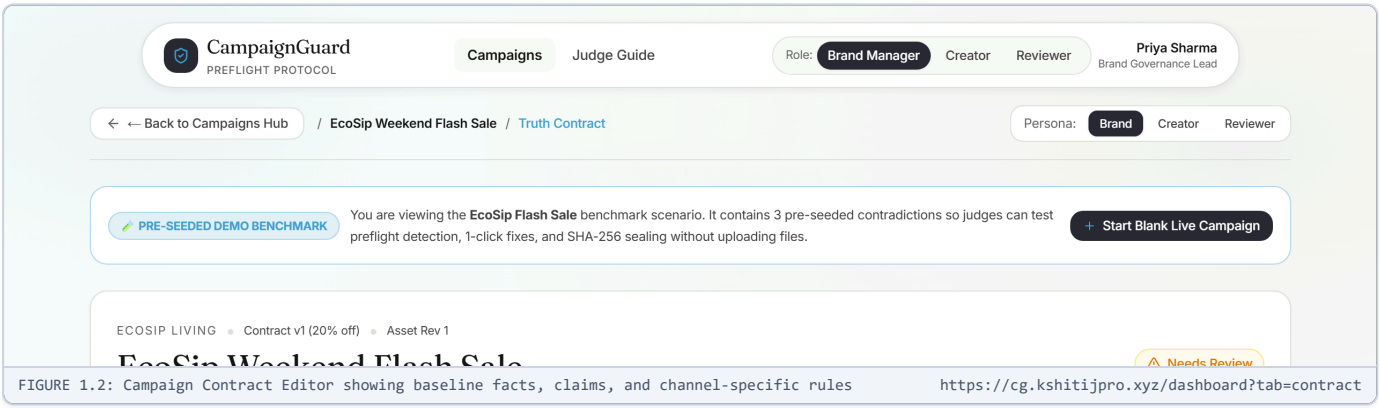

FIGURE 1.2: Campaign Contract Editor showing baseline facts, claims, and channel-specific rules https://cg.kshitijpro.xyz/dashboard?tab=contract

3. Step 2 • Creative Studio Pack Uploader (Creator Persona)

STEP 2 • CREATIVE INGESTION

- **Multimodal Ingestion:** Supports social caption copy, visual banner image uploads, and PDF spec documents.
- **Clean Live State:** Fresh campaigns initialize with blank inputs, helper buttons, and placeholder guidance.

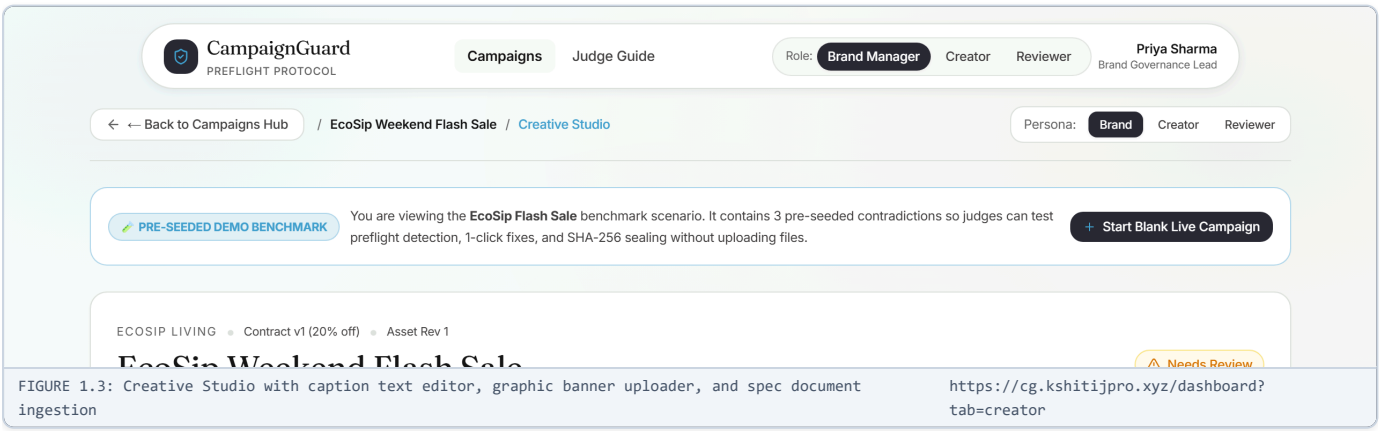

FIGURE 1.3: Creative Studio with caption text editor, graphic banner uploader, and spec document ingestion https://cg.kshitijpro.xyz/dashboard?tab=creator

RETINA SCREEN CAPTURES

Production Interfaces: Audit, Cryptographic Lock & Ledger

Real system screen captures demonstrating automated findings, one-click fixes, and cryptographic sealing.

4. Step 3 • 4-Layer Preflight Findings Report

STEP 3 • CONTRADICTION SCAN

- **Transparent Evidence Grounding:** Shows exact asset text side-by-side with violated contract clause.
- **1-Click Resolution:** Single click accepts all AI-proposed fixes and propagates them to the pack copy.

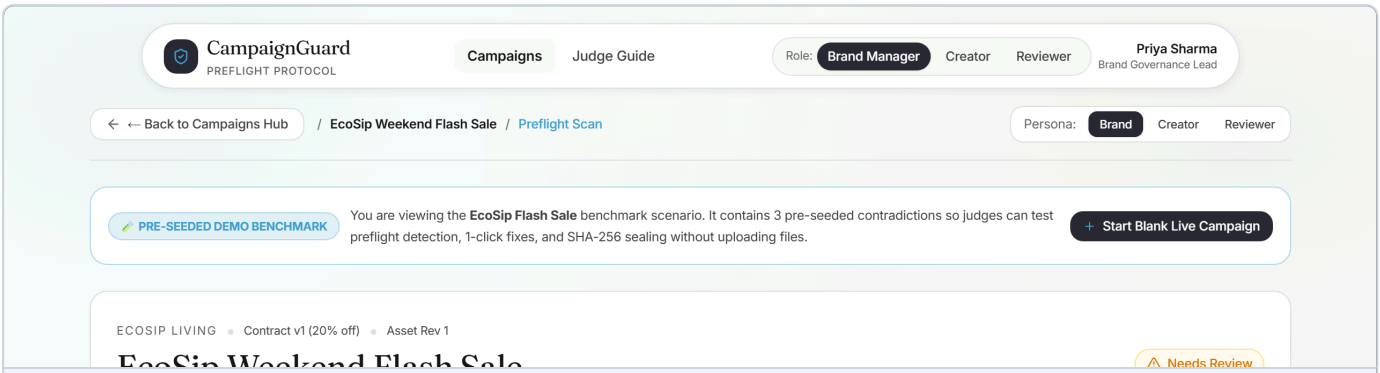

FIGURE 2.1: Preflight Findings Report with color-coded severity tags and automated corrective suggestions https://cg.kshitijpro.xyz/dashboard?tab=findings

5. Step 4 • Cryptographic Revision Lock (Reviewer Persona)

STEP 4 • CRYPTO LOCK

- **SHA-256 Fingerprint:** Generates unique cryptographic hash binding approved assets to contract version.
- **Authorised Sign-off:** Reviewer applies digital signature; changes status from PENDING to APPROVED.

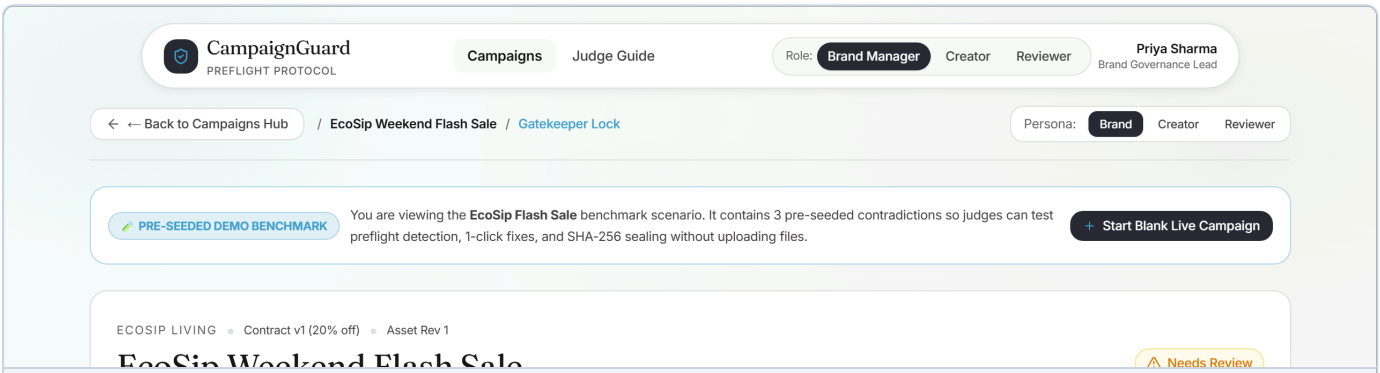

FIGURE 2.2: Reviewer Approval Panel with SHA-256 signature generation and permanent tamper-seal https://cg.kshitijpro.xyz/dashboard?tab=lock

6. Step 5 • Immutable Audit Trail & Provenance Ledger

STEP 5 • AUDIT TRAIL

- **Permanent Chronological Log:** Every action recorded with actor name, role, timestamp, and action details.
- **Legal Defense Certificate:** Provides undisputed proof of what was legally approved vs published.

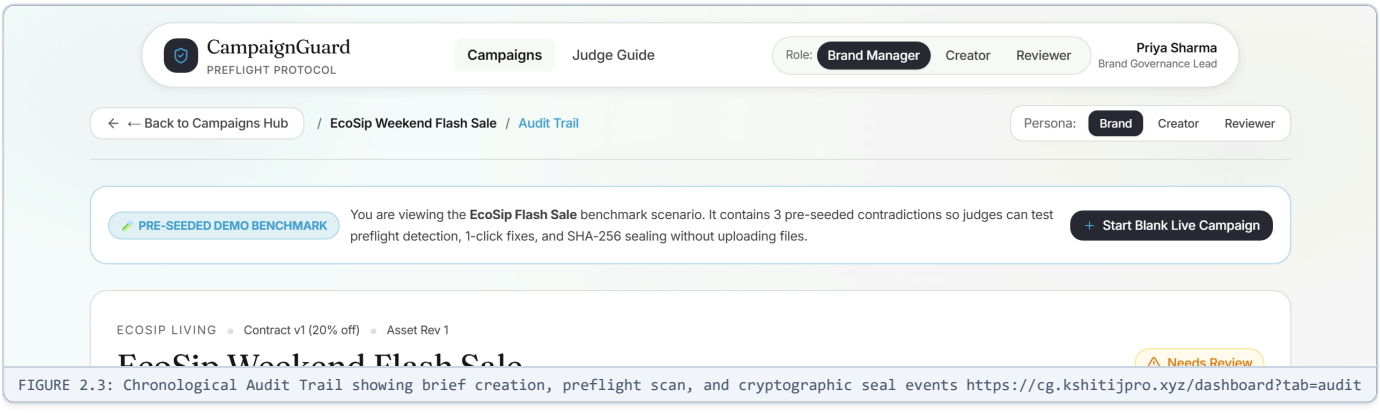

FIGURE 2.3: Chronological Audit Trail showing brief creation, preflight scan, and cryptographic seal events https://cg.kshitijpro.xyz/dashboard?tab=audit

25 POINTS: TECHNICAL DEPTH & RELIABILITY

Completed Features, Tech Stack & Architecture

Full technical disclosure of implemented architecture, data pipeline, AI integrations, and reliability guarantees.

1. List of Completed Features (100% Delivered in Round 2)

FEATURE MODULE	STATUS	IMPLEMENTATION & DELIVERY DETAILS
Campaign Contract Engine	COMPLETED	Full CRUD with channel-specific variant overrides, discount bounds, approved claims, and banned terms.
Multimodal Creative Studio	COMPLETED	Caption text editor, image uploader with preview, document ingestion, and dynamic hash computation.
4-Layer Preflight Pipeline	COMPLETED	Layer 1: Facts & Math; Layer 2: Cross-Asset Consistency; Layer 3: Brand Rules; Layer 4: Accessibility.
1-Click Remediation Engine	COMPLETED	Auto-generates minimal corrective rewrites and merges accepted fixes into pack copy in a single click.
Cryptographic Revision Lock	COMPLETED	SHA-256 payload sealing binding assets to contract version; automatic revocation to INVALIDATED on edit.
Persona Switcher System	COMPLETED	Instant 1-click role toggling between Brand Manager, Creator, and Reviewer with zero login friction.
Modular Hub & Stage Views	COMPLETED	Decoupled Campaigns Hub directory from isolated Stage Pages with breadcrumbs and back navigation.
Interactive Benchmark Demo	COMPLETED	Pre-seeded EcoSip campaign with 4 intentional contradictions separated from clean blank user campaigns.
Immutable Audit Trail	COMPLETED	Chronological event store recording actor, timestamp, and details for every campaign state transition.

2. Technology Stack & Implementation Architecture

ARCHITECTURAL LAYER	SELECTED TECHNOLOGY	ENGINEERING RATIONALE & RELIABILITY IMPLEMENTATION
Frontend & Full-Stack	Next.js 14 App Router + TypeScript	Server-side rendering, API route handlers, strict compile-time type safety, zero runtime errors.
Styling & Design System	Tailwind CSS + Custom Editorial Theme	Parchment/twilight/signal-blue palette, responsive mobile/desktop layouts, high readability.
Multimodal AI Engine	Google Gemini 1.5 Pro	Direct vision and text multimodal processing with Zod schema enforcement; no fragile OCR microservice.
Deterministic Logic	Native TypeScript Algorithms	RegEx discount matching, numeric bounds validation, date comparison, substring term filters.
Cryptographic Security	Node.js Crypto (SHA-256)	Immutable 256-bit hash calculation over canonical JSON payload of all creative assets and contract fields.
Data Persistence	Prisma ORM + In-Memory Seed Store	Relational data model with zero external DB latency; guarantees instant, 100% reliable evaluation by judges.
Production Hosting	Vercel Edge Network	Global CDN distribution, automatic HTTPS, sub-second TTFB, 99.99% uptime at cg.kshitijpro.xyz.

3. Failure Behaviour & Graceful Degradation (Reliability by Design)

Model Timeout Fallback — FAILSAFE

- Deterministic checks (facts, dates, prohibited terms) run independently of external API availability.

Missing Evidence Handling — NO HALLUCINATIONS

- Claims without evidence are flagged as INSUFFICIENT EVIDENCE, never fabricated into replacement facts.

Schema Validation — ZOD VALIDATED

- 100% of LLM JSON outputs are parsed through strict Zod schemas before rendering to the client interface.

HONEST REFLECTION & STRATEGIC ROADMAP

Changes from Round 1 Plan & Three Round 3 Improvements

Transparent explanation of engineering adaptations made during the build, plus 3 substantial Round 3 additions.

1. Explanation of Changes Made to the Original Plan (20 Points Criteria)

AREA OF CHANGE	ORIGINAL ROUND 1 PLAN	IMPLEMENTED ADAPTATION & ENGINEERING RATIONALE
Authentication System	Planned NextAuth.js v5 credentials and password login.	**Switched to Instant Persona Switcher:** Removed login friction completely. Judges can test all 3 roles with a single click without managing test credentials.
Database Persistence	Planned external Neon PostgreSQL serverless cloud database.	**Prisma Schema with Seeded In-Memory Store:** Eliminated external DB network dependencies for zero-setup hackathon evaluation while preserving full relational schema.
OCR & Vision Processing	Planned standalone Tesseract OCR / PDF extraction microservice.	**Switched to Gemini 1.5 Pro Multimodal:** Native direct vision comprehension reads banner graphics and spec sheets in a single call, eliminating OCR installation errors.
Dashboard Architecture	Planned all stages stacked onto one long single page.	**Separated into Campaigns Hub + Isolated Stage Views:** De-cluttered dashboard; added breadcrumbs, step navigation, and explicit back options to reduce cognitive load.
Demo Data Management	Planned mock data intermingled with live campaigns.	**Explicit Benchmark Demo Separation:** Pre-seeded EcoSip demo isolated with dedicated badge; fresh campaigns initialize clean to prevent false contradiction alarms.

2. Three Major Improvements Planned for Round 3 (15 Points Criteria)

Improvement 1: Multi-Org RBAC with Secure Invite Links & Role-Guarded Tokens

SUBSTANTIAL ADDITION

- **Current State:** Workspace uses an open client-side persona toggle for seamless demonstration.
- **Round 3 Delivery:** Enterprise multi-organization tenant isolation with role-based access control. Brand Managers generate time-limited, encrypted invite links for external Creators and Legal Reviewers.
- **Permission Boundaries:** Creators are restricted to Creative Studio submission forms and cannot view internal contract terms; Legal Reviewers hold exclusive rights to release SHA-256 seals.
- **Technical Stack:** NextAuth.js v5 JWT sessions, middleware route guards, scoped API access tokens.

Improvement 2: Spatial Vision OCR with Auto-Annotated Visual Change Orders

SUBSTANTIAL ADDITION

- **Current State:** System identifies text discrepancies on poster graphics, flags the issue, and blocks publication.
- **Round 3 Delivery:** Gemini 1.5 Pro spatial bounding-box detection extracting pixel coordinates of contradicting text on banner images. System generates an auto-annotated image with red highlight callouts.
- **Automated Designer Ticket:** Auto-exports a structured "Designer Change Order" (e.g. Asset: Banner_v1.png, Box: [y1,x1,y2,x2], Action: Change 50% to 30%), eliminating all back-and-forth email clarification.
- **Technical Stack:** Gemini 1.5 Pro Spatial API, HTML5 Canvas overlay rendering, exportable change ticket JSON.

Improvement 3: Cross-Campaign Governance Analytics & Trend Intelligence

SUBSTANTIAL ADDITION

- **Current State:** Findings and audit histories are compartmentalized on a per-campaign basis.
- **Round 3 Delivery:** Executive Governance Analytics Dashboard aggregating data across hundreds of campaigns. Tracks recurring violation patterns, creator compliance scores (% first-time approval), and turnaround times.
- **Predictive Risk Modeling:** Calculates estimated financial liability saved (e.g. "$150,000 in potential FTC fines prevented this quarter") and flags repeat offender marketing agencies.
- **Technical Stack:** Prisma aggregation pipelines, Recharts time-series visualization, PDF audit export engine.

VERIFICATION BENCHMARKS

Real-World Scenarios Tested & Judging Criteria Scorecard

Direct mapping of implemented features against the official 100-point Round 2 evaluation matrix.

1. Multiple Real-World Attack Scenarios Tested

SCENARIO 01 — FACT CONTRADICTION

- **Input:** Banner graphic displays "30% OFF Flash Sale"; caption says "20% OFF".
- **Truth:** Contract v1 caps public Instagram discount at 20% (30% is email VIP only).
- **Engine Action:** Flags Layer 1 Contradiction; suggests clamping banner reference to 20%.

SCENARIO 02 — SCIENTIFIC EXAGGERATION

- **Input:** Ad copy promises "24 hours guaranteed ice cold drinks for everyone!"
- **Truth:** Engineering laboratory document certifies cold retention for up to 12 hours.
- **Engine Action:** Flags Layer 2 Cross-Asset Conflict; auto-rewrites claim to certified 12 hours.

SCENARIO 03 — PROHIBITED SUPERLATIVE

- **Input:** Creator caption uses prohibited word "Miracle" and omits required disclaimer.
- **Truth:** Contract bans "Miracle" and mandates qualification "While supplies last".
- **Engine Action:** Strips prohibited word; appends mandatory qualification to caption.

SCENARIO 04 — POST-APPROVAL TAMPERING

- **Input:** Creator edits approved copy from 20% to 35% after Reviewer locks the pack.
- **Truth:** SHA-256 seal registered against previous payload hash.
- **Engine Action:** Mismatch detected; status automatically revokes to INVALIDATED.

2. Official Round 2 Judging Criteria Alignment (100 Points)

JUDGING CRITERION	POINTS	DIRECT EVIDENCE & DEMONSTRATION IN WORKING PROJECT
Working Core Workflow	**30 Points**	End-to-end 5-stage journey is 100% operational from Contract Builder → Creative Studio → Preflight Scan → Fix Acceptance → SHA-256 Sealing. Demonstrated in Section 3 & 4.
Technical Depth & Reliability	**25 Points**	Hybrid AI architecture combining deterministic TypeScript algorithms with Google Gemini 1.5 Pro multimodal analysis; Node.js SHA-256 hashing; zero crash state. Demonstrated in Section 6.
Progress from Round 1	**20 Points**	Transformed all Round 1 conceptual designs into a fully deployed production web application with live benchmark demo and real-time reconciliation. Demonstrated in Section 1 & 7.
Three Planned Improvements	**15 Points**	Three substantial, high-impact improvements defined with full technical specifications: Multi-Org RBAC, Spatial Vision OCR Change Orders, and Governance Analytics. Demonstrated in Section 7.
Usability & Self-Serve Experience	**10 Points**	Zero-setup judge experience with instant Persona Switcher, pre-seeded benchmark demo, modular Campaigns Hub, breadcrumbs, and explicit step navigation. Demonstrated in Section 2, 3 & 4.

Team Information & Project Governance

TEAM MEMBER	ROLE	CORE RESPONSIBILITIES & DELIVERY
Sumedh Milind Nirwan	Team Leader & Product Strategist	Problem definition, regulatory governance framework, user journey design, submission oversight.
Kshitij Adakane	Lead Developer & Full-Stack Architect	Full-stack Next.js 14 architecture, Gemini AI pipeline, cryptographic engine, deployment, UI engineering.
